### Department of Community Medicine

#### World Environment Day June 5<sup>th</sup> 2017 Report

World Environment Day is marked on June 5<sup>th</sup> every year. This day is the biggest annual event for positive environmental action. World environment day was first marked in the year 1972. “**Connecting People to Nature**” is the theme for world environment day 2017. This theme was chosen by host country Canada with the aim is to get people outdoors and bring them into nature, to appreciate its beauty and its importance, and to take forward the call to protect our Earth that we share.

Time	Program	Guest
11.00 AM	Inauguration of Green & Clean Tagore	Dr. S. Shantha, Dean, TMCH, Dr. Thirunarayanan, Medical Superintendent, TMCH
11.15 AM	Health education about	Dr. V. Umamaheshwari, Tutor, Department of Community Medicine
11.30 AM	Skit about importance of environment	2 <sup>nd</sup> Year MBBS students

Dr. K.R. Sowmiya, Associate Professor, Department of community medicine welcomed our beloved Dean Dr. S. Shantha, respected Medical Superintendent Dr. R. Thirunarayanan, HOD's and faculties of various departments, students and public for the program. Dr. A. Balaji, Professor and Head, Department of community medicine started the program with enlightening the gathering about the importance of the world environment day. The dignitaries were invited to inaugurate the 'Green and Clean Tagore' campaign. This honor was accepted.

### **OVERVIEW:**

1. Health education on leprosy.
2. Role play on Leprosy awareness, social stigma, signs & symptoms, early detection and treatment course & duration.
3. Quiz on Leprosy.

### **HEALTH EDUCATION:**

- India continues to account for 60% of new cases reported globally each year.
- Leprosy is a chronic disease caused by a bacillus, *Mycobacterium leprae*.
- The disease mainly affects the skin, the peripheral nerves, mucosa of the upper respiratory tract, and also the eyes. Leprosy is curable with multidrug therapy (MDT).
- Though the number of leprosy cases has steadily declined worldwide, an estimated 20000 cases continued to be reported every year, with India accounting for more than half.

## **A Covid-19 Vaccine Is A Vaccine Intended To Provide Acquired Immunity against Severe Acute Respiratory Syndrome Coronavirus2 (Sars-Cov-2), the Virus Causing Corona Virus Disease 2019(Covid-19)**

### **About The Vaccine Which Are Licensed In India:**

- Two Vaccines Were Granted Emergency Use Authorization By The Central Drugs Standard Control Organization (Cdsco) In India, Covidshield (AstraZeneca's Vaccine Manufactured By Serum Institute Of India) And Covaxin (Manufactured By Bharat Biotech Limited). Sputnik-V Has Been Granted Eua In The Month Of April 2021.
- Both The Indian Covid-19 Vaccines Have Completed Their Phase I&II Trials. Covidshield Has Completed Its Phase Iii Trials In UK And The Bridging Trial In India.

### **Vaccine Trial Phases Includes:**

- I. Pre-Clinical: Vaccine Development in Laboratory Animals
  - II. Phase 1 Clinical Trial (A Small Number of Participants): Assess Safety, Immune Response and Determine Right Dosage (Short Duration)
  - III. Phase 2 Clinical Trials (Few Hundreds Participants): Assess Safety and Ability of the Vaccine to Generate an Immune Response (Short Duration)
  - IV. Phase 3 Clinical Trial (Thousands Of Participants): Determine The Vaccine Effectiveness Against The Disease And Safety In Larger Group Of People (Duration 1-2 years).
- Covid Shield Vaccine, Manufactured By The Serum Institute Of India, Is A Viral Vector-Based Technology Which Is Also Used To Manufacture Ebola Vaccine.
  - Covaxin Vaccine, Manufactured by the Bharat Biotech, Is A Whole –Virion Inactivated Corona virus Vaccine Which Is Also Used To Manufacture Vaccine Like Influenza, Rabies and Hepatitis-A.

### **COMPOSITION FOR BOTH VACCINES**

- Composition of covidshield includes inactivated adenovirus with segment of coronavirus, aluminium hydroxide gel, L-histidine, L-histidine hydrochloride monohydrate, magnesium chloride hexahydrate, polysorbate 80, ethanol, sucrose, sodium chloride, and disodium edetate dihydrate (EDTA). Composition of covaxin includes inactivated coronavirus, aluminium hydroxide gel, TLR7/8 agonist, 2-phenoxyethanol and phosphate buffered saline (pH 7.4).
- Both vaccine need to be stored and transported at +2 to +8 °C. The cold chain for both vaccine is maintained through active and passive cold chain equipment available at approximately 29000 cold chain points across India.

  
DEAN  
TAGORE MEDICAL COLLEGE & HOSPITAL  
RATHINAMANGALAM, MELAKOTTAIYUR POST,  
Chennai-600 127.

- Developing a vaccine generally involves years of research. First, we need a vaccine candidate that is evaluated in animals for its safety and efficacy. After a vaccine candidate passes a pre-clinical trial, it enters the clinical trial phase. While scientists have worked round the clock in the laboratory, even regulatory approvals which used to take several months have been tracked. It helped eliminate all the time lapses between the pre-clinical and clinical trial stages. Earlier the vaccine development involved a series of steps, but in the case of the corona virus vaccine, the scientists and regulators worked in tandem, accelerating the whole process without compromise on any protocols and any steps.
- The safety and efficacy data from clinical trials of vaccine candidates are examined by drug regulator of our country before granting license for the same. Hence, all the covid-19 vaccines that receive license will have comparable safety and efficacy. However, it must be ensured that the entire schedule of vaccination is completed by only one type of vaccine as different covid-19 vaccines are not interchangeable.
- Persons with confirmed or suspected covid-19 infection may risk of spreading the same to others at vaccination site. For this reason, infected individuals should defer vaccination for 14 days after symptoms resolution.
- When an increasing number of people get vaccinated in the community, indirect protection through herd immunity develops. The percentage of people who need to be immune varies with each disease. For example, it's 95% for measles, however the proportion of the population that must be vaccinated against covid-19 to begin inducing herd immunity is not known.

**COVID VACCINATION CAMPAIGN AT TAMILNADU POLICE OWN  
HOUSING CORPORATION IN MELLAKOTTAIYUR BY TAGORE MEDICAL  
COLLEGE AND HOSPITAL COMBINED WITH GOVERNMENT PRIMARY  
HEALTH CENTER, KELAMBAKKAM.**

**DATE: 15/04/2021**

**TAGORE MEDICAL TEAM:**

**Dr.A.BALAJI( HOD COMMUNITY MEDICINE)**

- Dr.vikram( AP)
- Dr.karthik( AP)
- Dr. Vinodh Raja (PG)
- Dr. Keerthana(PG)
- Dr. Kavitha(PG)
- Dr .Nivetha(PG)
- Dr.Jedadeesh(CRRI)
- Mr.Ganapathy(Health Educator)
- Mr. Sugumaran (Health Inspector)

**GOVERNMENT MEDICAL TEAM**

- ❖ Dr.Subramaniam(Block Medical Officer)
- ❖ Mr.Gunasekaran(Health Inspector)
- ❖ Mrs.Mary gillet(VHN)

**ORGANISER FOR THIS CAMP AT TNPOHC**

- Mr.Muthu Krishnan
- Mr.krishnaswamy

✓ TOTAL NO OF BENEFICIARY =79

✓ TOTAL NO OF OUT PATIENT=110

**PROGRAMS:**

- Awareness about the vaccine
- Vaccination
- Health education
- Post vaccination Surveillance
