CONSOLIDATED REPORT OF SPECIAL PROGRAM FOR ADVANCED LEARNERS AND SLOW LEARNERS FOR ACADEMIC YEAR 2021-2022

The Tagore Medical College and Hospital, Rathinamangalam, Chennai is affiliated to The Tamil Nadu Dr. M.G.R. Medical University and follows the syllabus prescribed by National Medical Commission (NMC).

Identifying learning levels of the students:

The students were identified as slow learners and advanced learners based on the following criteria:

1. Slow learners

Students securing less than or equal to 40% marks in the 1st Internal assessment theory and practical examination

2. Advanced learners

Students securing more than or equal to 60% marks in 1st internal theory and practical examinations.

In addition to Internal Assessment Marks, other aspects like punctuality, attendance and regularity in assignment submission, attentiveness in the class and remarks from the mentors were also considered in the identification of slow and advanced learners.

Special programs developed for slow learners:

1. Continuous monitoring and individual attention by assigning mentors
2. Remedial classes were conducted after college working hours by each department
3. Assignments were given additionally before each internal examination to promote learning and a teaching faculty is made in charge to ensure the timely submission of the assignments
4. The students were subjected to focused reading of certain important topics under the supervision of faculty to enhance their understanding and presentation of these topics.
5. Improvement exams were conducted apart for the students to improve their performance
6. Special notes for significant topics were developed by the faculty and provided to the students.

(Affiliated to the Tamil Nadu Dr.MGR Medical University & Recognized by the Ministry of Health & Family welfare. Govt. of India New Delhi)

Special programs for advance learners:

1. The students were encouraged to take up ICMR STS (Indian Council of Medical Research – Short Term Studentship) projects under the guidance of teaching faculty
2. Presentation of research papers and posters in conferences conducted by other institutions.
3. The students were encouraged to taken up additional courses in platforms like SWAYAM and NPTEL.
4. Rewards/Mementoes were given to the students scoring highest marks in the university examinations
5. The students were guided by the teaching faculty in research article writing and publication.
6. The students were encouraged to take up leadership roles in student council and other student centric committees/clubs of the institution.

Criteria for Measurement of student's performance and outcome:

1. Continuous internal assessment examination (theory and practical including viva-voce)
2. The University Examinations.

DEPARTMENT OF MICROBIOLOGY

II MBBS 2019 BATCH - SLOW LEARNERS LIST

The below mentioned students belonging to II MBBS (2019 batch) were identified as slow learners as they have scored below 40% marks in the 1st Internal Assessment conducted on 7.6.2021. They are hereby instructed to attend remedial classes on every Wednesday (3:30PM - 4:30PM) in the Department of Microbiology demonstration room. Assignments and tests will be conducted on due course and intimated in advance. The circular regarding assignment and test topic with dates will be put up in the department notice board. Assignments to be submitted to faculty in charge. Mentors are allotted for the following students. Students are instructed to approach the respective mentor for any clarification and guidance.

II MBBS 2019 BATCH - SLOW LEARNERS

ASSIGNMENT & TEST SCHEDULE

DATE	Teaching Learning Method	FACULTY NAME
19.08.2021	Assignment: GIT	Dr. Sony
27.08.2021	Test Portions: BSI,CVS,GIT, Hepatobiliary, RTI,GUS,STD	Dr. Savetha

ASSIGNMENT QUESTION: 19.08.2021

(1X20=20 MARKS)

1. Write in details about morphology, pathogenesis, clinical features and laboratory diagnosis of Vibrio cholerae

CLASS TEST: 27.08.2021

Total Marks: 20

Time: 1 Hour

2. Write in details about pathogenesis, clinical features and laboratory diagnosis and prophylaxis of Influenza virus. (1X20=20Marks)

29/6/21

Deekshana Rajendran

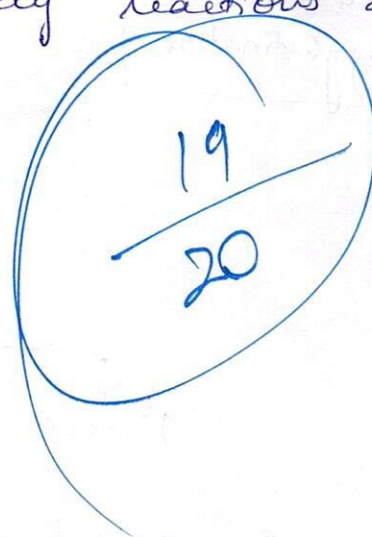

Roll: 22

MICROBIOLOGY TEST

1. Antigen Antibody Reactions :-

→ The types of antigen antibody reactions are

- Precipitation reaction
- Agglutination reaction
- Complement fixation.
- ELISA
- Immunofluorescence.

* AGGLUTINATION REACTIONS:-

→ The interaction between antibody w/ a particulate (insoluble) antigen results in visible clumping is called agglutination.

→ The various particulate antigens are

- WBCs
- RBCs
- Latex particles.

• Principle

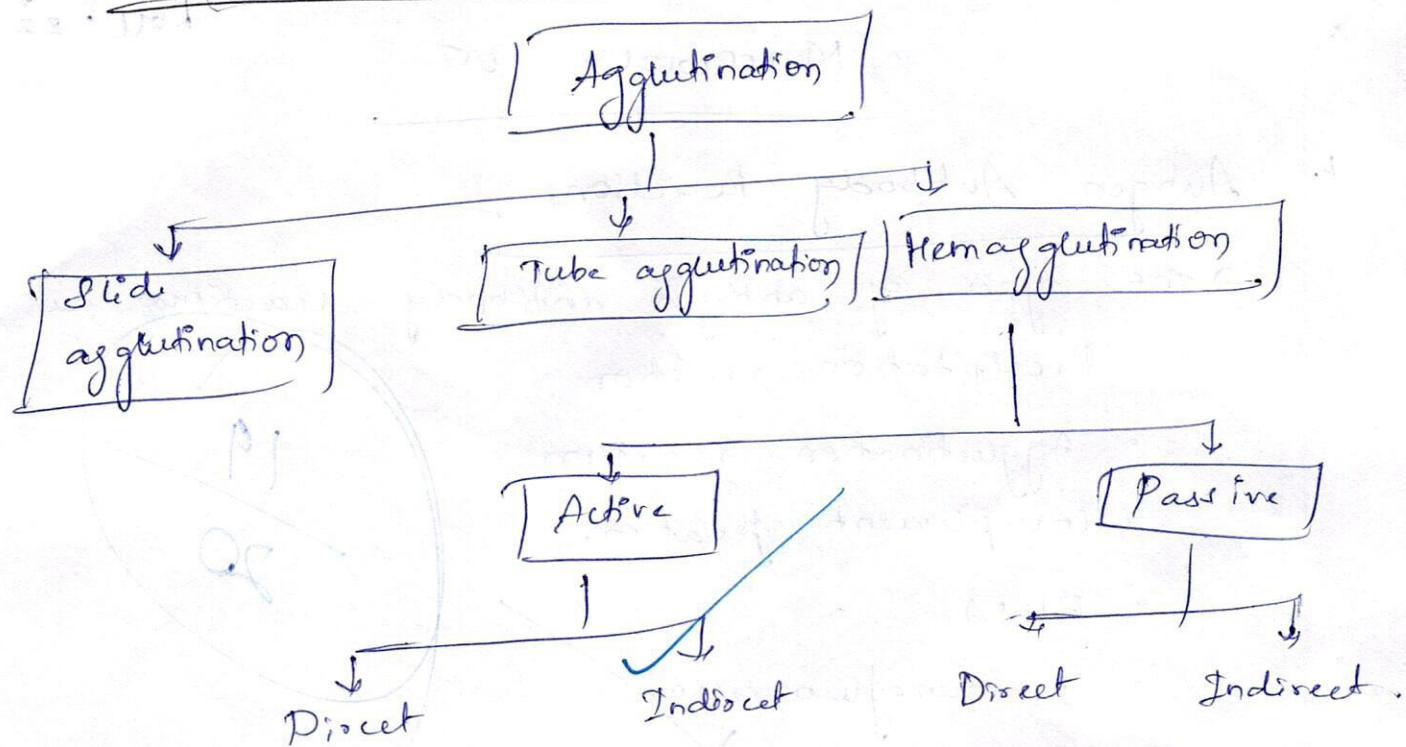

→ It is the visible aggregation of particles caused by combination of with specific antibody.

→ ~~Antibodies~~ ^{DEAN} that produce such reactions are called agglutinins.

→ The antigen must be exposed w/ able to bind with antibody.

TAGORE MEDICAL COLLEGE & HOSPITAL
RATHINAMANGALAM, MEENAKOTTAH ROAD
Chennai-600 127.

• Types of agglutination reactions:-

• steps in agglutination:-

1) sensitization

↓
2) lattice formation

→ formation of cross links

~~Visible aggregates~~

DEAN
TAGORE MEDICAL COLLEGE & HOSPITAL
RATHINAMANGALAM, MELAKOTTAIYUR POST,
Chennai-600 127.

• Phases:

1) Primary phase

2) Secondary phase

* Applications:-

- ABO Blood grouping.
- Rh blood grouping.
- Widal test for typhoid.
- Weil Felix test for typhus.
- Coomb's test for identification of anti Rh antibodies.
- Brucella agglutination test for brucellosis.
- Leptospira agglutination for leptospira.
- Cold agglutination test for pneumonia, malaria, typanosomiasis.
- Hemagglutination inhibition test. ¶

A Cross-sectional Study on Nomophobia among Undergraduate Medical Students in Chennai, India

GANESH SHANMUGASUNDARAM ANUSUYA¹, HANSCIE DINAH², BALAJI ARUMUGAM³,
RECHARLA CHENCHU KARTHIK⁴, RADHAKRISHNAN ANNAMALAI⁵, EZHILVANAN MANI⁶

ABSTRACT

Introduction: Nomophobia is the fear of being away from mobile phone contact or in other words nomophobia is the irrational fear of being without mobile phone. Nomophobia is an emerging psychological public health problem.

Aim: To determine the prevalence of nomophobia and pattern of mobile phone usage among medical students in Chennai.

Materials and Methods: This cross-sectional study was done among 400 undergraduate medical students of Tagore Medical College and Hospital, Chennai, Tamil Nadu, India, studying from 1st year to 4th year, over a period of two months (July 2019 and August 2019). A structured questionnaire, developed by Yildirim C and Correia AP, was used to determine the prevalence of nomophobia among the study population. Stratified simple random sampling technique was used, where

100 students from each study year were selected. Descriptive statistics and chi-square test were done to compare the severity of nomophobia with various variables.

Results: Out of 400 students, 50% (200) were males and 50% (200) were female students. Overall, 85% (340) used mobile internet. The top three reasons for using mobile internet were WhatsApp (95%), YouTube (81.3%) and Instagram (74.3%). The overall prevalence of nomophobia was 99% (396); 17.5% (70) showed severe nomophobia, 56.3% (225) moderate nomophobia, and 25.3% (101) had mild nomophobia. Severe nomophobia was associated with mobile usage >5 hours in a day (p-value=0.013).

Conclusion: Health education and health awareness campaigns regarding nomophobia should be created among the undergraduate medical students.

Keywords: Addictive, Behaviour, Predictor, Prevalence, Smartphone

INTRODUCTION

The fear of being out of contact with one's own mobile phone (situational phobia) is called Nomophobia [1]. The term NOMOPHOBIA or NO MOBILE PHONE PHOBIA is used to describe a psychological condition in which people have a fear of being detached from mobile phone connectivity [2]. Among college students smartphone is the one of the most popular electronic gadget due to the variety of functions and features it provides. According to a survey conducted by the Mobile Ecosystem Forum in 2019, the highest number of smartphone users was in the age group of 16 to 24 years, with 37 percent [3]. Smartphone is a boon that makes it possible to perform a range of day-to-day tasks in a single device, including calling, texting people, sending emails, scheduling meetings, surfing the internet, e-shopping, social networking, playing games, entertainment, etc.

Nomophobic behaviours have the tendency to alter our daily habits, and it has been proposed that they be treated as an addiction [4,5]. For this reason it was proposed that nomophobia be included in the Diagnostic and Statistical Manual of Mental Disorders-V (DSM-V) [6]. Nomophobics show some typical characteristics like using multiple mobile phones and chargers, frequently eyeing phones to see for notifications, and keeping mobile phones close during sleep [7]. People with nomophobia seem to be preoccupied with the virtual world and avoid face-to-face interaction [7,8]. Various risks associated with nomophobia are tachycardia, sweating, respiratory distress, disorientation, and agitation [8,9].

Many studies have shown a positive relationship between mobile phone usage and sleep deprivation and anxiety [10,11]. Research shows that nomophobia is on the rise across India and more and more people fear being without being or losing their mobile phones even for a day or even an hour but the research into nomophobia has been scanty [1].

According to a survey conducted by the Mobile Ecosystem Forum from November to December 2019, the highest smartphone users were in the age group of 16 to 24 years, with 37% from India [3]. The medical undergraduate students also come under the above age group. Also, nomophobia is an emerging public health problem which has not been much studied among the medical undergraduate population. Hence, by identifying the prevalence and predictors of nomophobia among undergraduate medical students, we can prevent them from becoming nomophobic by implementing preventive measures in college. Thus, this research aimed to study the prevalence and predictors of nomophobia among undergraduate medical students.

MATERIALS AND METHODS

This cross-sectional study was conducted among undergraduate medical students, studying from 1st year to 4th year in Tagore Medical College and Hospital, Chennai, Tamil Nadu, India. The study duration was of two months (July 2019 and August 2019). Ethical clearance for the study was obtained from the Institutional Ethical Committee (IEC No:01/June/2019).

Sample size calculation: Based on the prevalence of nomophobia (39.5%) [12], sample size was calculated to be 382, with absolute precision of 5% and the confidence interval of 95%. It was finally rounded off to 400. Hence, there were 100 students from each year of the academic session (1st to 4th).

Inclusion criteria: Both male and female undergraduate medical students who were willing to participate in the study, and gave informed consent were included into the study.

Exclusion criteria: Interns were not included in the study. Students who were not using mobile phones were excluded.

Sriram .T Prefinal final student, won 2nd prize in OBG case presentation in EMPOWER 2021 – 16th International Medical Students' Research Congress conducted by Govt. Stanley Medical College, Chennai under the guidance of Dr.P.B Premalatha Prof & HOD Dept of Obstetrics and Gynaecology, TMCH
